

Nowhere else are the benefits of powder coating more evident than in the design industry. API Powder coating is an economical method of applying a virtually unlimited range of colors, finishes and textures to our extrusions, brake metal, doors and other products. Our state of the art Powder Coating Facility is one of the newest and largest in the retail storefront industry and enables us to reduce costs and lead times commonly associated with powder coating. Whether you specify API or not, our custom color matching ensures that your storefront materials meet with the standards and requirements of your job. Call us today for color matching options!

We can also create most any custom design you wish, including Logos, Geometric Shapes, Contemporary and Floral Designs, Stripes, etc.

Check out our NEW Wood-Look and Marble-Look Finishes!!!

Our unique ability to extrude, shear, brake and powder coat metal under one roof truly make API the One-Stop-Shop for retail storefronts!

NOTE: Powder coating is specified because of its durability and resistance to fading. The powder used for the process is a mixture of finely ground particles of pigment and resin, which is sprayed onto a surface to be coated. The charged powder particles adhere to the electrically grounded surfaces until heated and fused into a smooth coating in a curing oven. The result is a uniform, durable, high-quality, and attractive finish.
